EXECUTIVE SUMMARY

On behalf of Covington Investments, LLC (Covington) and its successors and assigns, Advanced Environmental Concepts, Inc. (AEC) performed a Phase I Environmental Site Assessment (ESA) at the 15.518-acre undeveloped property that is bordered to the north by Johnson Road and is 0.125-miles west of Grasshopper Road in Apple Valley, California. The site is identified by three San Bernardino County Assessor's Parcel Numbers (APNs) of 0472-211-17 (5.169-ac), -18 (5.169-ac), and -21 (5.18-ac) and comprises the majority of the West Half of the Northeast Quarter of the Northeast Quarter of Section 24; Township 6 North, Range 4 West of the San Bernardino Base & Meridian System (SBB&M).

The subject property is bordered to the north by Johnson Road; the southern, eastern, and western boundaries are not defined by established paved and/or unimproved roads. The subject site consists of native desert covered with creosote bushes and there are a few ephemeral drainages that incise the surface of the property. Also, AEC observed a small amount of windblown trash scattered across the site.

The ESA process under ASTM (Current Standard E1527-21) was created to identify *recognized environmental conditions* (RECs). The descriptive term "recognized environmental condition" is defined as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The ESA process additionally identifies *controlled recognized environmental conditions* as a REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances allowed to remain in place subject to institutional controls. Also, a *historical recognized environmental condition*, i.e. an HREC is defined as a previous release of *hazardous substances or petroleum products* affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the *subject property* to any controls (for example, *activity and use limitations* or *other property use limitations*). Finally, a *de minimis condition* is not a recognized environmental condition; however, AEC will identify non-ASTM conditions which are considered de minimis and do not present a material risk of harm to public health or the environment and would not be the subject of an enforcement action if brought to the attention of an appropriate governmental agency.

The results of this investigation have identified no *de minimis conditions*, no *recognized environmental conditions* (RECs), no *controlled recognized environmental conditions*, and no *historical recognized environmental conditions*.

AEC has conducted this Phase I Environmental Site Assessment at the 15.518-acre undeveloped property that is bordered to the north by Johnson Road and is 0.125-miles west of Grasshopper Road in Apple Valley, California (the Property) in conformance with the scope and limitations of ASTM Standard E1527-21. Any exceptions to, or deletions from this practice are described in Section 5.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; therefore, AEC recommends that no further action is warranted.

1.0 INTRODUCTION

Advanced Environmental Concepts, Inc. (AEC) was retained by Covington Investments, LLC and its successors and assigns ("User"), to prepare this Phase I Environmental Site Assessment at the 15.518-acre undeveloped property that is bordered to the north by Johnson Road and is 0.125-miles west of Grasshopper Road in Apple Valley, California (the "Property"). A location map for the Property is presented as Figure 1 in Appendix A. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and general conformance with ASTM E1527-21.

2.0 PURPOSE

The purpose of this assessment is to identify recognized environmental conditions located at the subject site or adjacent properties which could present material risk of harm to public health or to the environment.

This assessment is intended to constitute appropriate inquiry into the previous ownership and uses of the property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the Landowner Liability Protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

If known or suspected contamination is identified, Users seeking to maintain Landowner Liability Protections have responsibilities in addition to completing an AAI-compliant Phase I Environmental Site Assessment. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the tenure of property ownership. In addition to these requirements under Federal law there are also different requirements under state law with respect to liability protections. On request, Advanced Environmental Concepts, Inc. can provide support for clients with continuing obligations, as appropriate.

3.0 SCOPE OF SERVICES

To evaluate the potential presence of recognized environmental conditions, this preliminary investigation consisted of the following:

- Contacting appropriate regulatory agencies for hazardous materials information concerning the subject site and surrounding areas located within an approximate 1-mile radius of the site boundaries. Inquiries were made regarding documentation of: (a) toxic spills; (b) underground storage tanks; (c) the use, storage (including aboveground storage tanks), generation, and/or disposal of hazardous materials; (d) the presence of disposal wells and/or leach fields, drain fields, and septic systems; and, (e) violations of applicable environmental control standards;
- Conducting interviews and researching historical site usage for information regarding past or present recognized environmental conditions;
- Reviewing selected database reports, maps, and aerial photographs for information pertaining to potential sources or visual indications of soil and groundwater contamination;
- Conducting an on-site inspection and off-site reconnaissance to identify visible evidence of the generation, use, storage, spills, or disposal of hazardous materials;
- Evaluating investigational findings and the preparation of a detailed report inclusive of findings and recommendations.

4.0 SPECIAL TERMS AND CONDITIONS

The information included in this report is intended for use exclusively as a preliminary assessment of potential environmental and human health concerns at the project site. Data is generally obtained through telephone conversations, personal interviews, public records, public information, general maps and aerial photographs. These services have been rendered by Advanced Environmental Concepts, Inc. (AEC) in accordance with generally accepted practices by professional geologists and environmental specialists. Also, the report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. Because of the limited nature of this investigation, the firm is precluded from providing a warranty, expressed or implied, regarding the presence of hazardous materials that could potentially adversely affect the subject site.

This report is provided with the understanding that it is the responsibility of the owner to convey the information and recommendations contained herein, to the appropriate regulatory agencies, as required. The services performed in the scope of this project are for the sole use of our client. Others who seek to rely on the findings contained within this report have a duty to determine the adequacy of the information presented herein, for their time, location, and intended use.

5.0 LIMITATIONS AND ASSUMPTIONS

This report presents the results of a Phase I Environmental Site Assessment conducted by **Advanced Environmental Concepts, Inc. (AEC)** for Covington Investments, LLC and its successors and assigns (client) on the following property:

**15.518-acre Undeveloped Property
South of Johnson Road and 0.125-miles West of Grasshopper Road
County of San Bernardino • Apple Valley, California**

No other properties were included within the scope of this assessment except as required for the off-site reconnaissance and for the regulatory agency database and file review pertaining to potential sources of offsite recognized environmental concerns. Historical information regarding the subject parcels is limited to review of maps, public documents, interviews with people knowledgeable with the past and present uses of the property, and aerial photography review.

The investigation focused on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks, (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observation determined that hazardous substances are likely to be present in "actionable" concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Quantitative identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

AEC assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. AEC assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The information regarding "purchase price" to "fair market value" is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I Environmental Site Assessment Report.

The following limitations/restrictions were placed on AEC:

- There were no limiting factors that impeded access to AEC for the entire subject property.

6.0 GENERAL SITE CHARACTERISTICS

6.1 Site Location and General Site Description

The subject 15.518-acre undeveloped property is along the south side of Johnson Road and 0.125-miles west of Grasshopper Road in Apple Valley, California. The site is identified by three San Bernardino County Assessor's Parcel Numbers (APNs)¹ of 0472-211-17 (5.169-ac), -18 (5.169-ac), and -21 (5.18-ac) and comprises the majority of the West Half of the Northeast Quarter of the Northeast Quarter of Section 24; Township 6 North, Range 4 West of the San Bernardino Base & Meridian System (SBB&M).

The current registered owner(s) of this property are identified as follows:

APN: 0472-211-17:

Richard E. Wilson II, a single man, as to an undivided 1/4 interest; Cambridge & Vieira Enterprises, Inc., a suspended California Corporation, as to undivided 1/4 interest; Jeffery D. Goldmann, a single man, as to an undivided 1/4 interest; and Daniel R. Sanborn and Dawna L. Sanborn, husband and wife, as joint tenants, as to an undivided 1/4 interest

APN: 0472-211-18:

Christopher B. Allen, a married man, as to an undivided 1/6th interest; Christopher Bruce Allen and Roberta M. Allen, as Trustees of The Allen Family Revocable Trust of 1998 dated May 28, 1998, as to an undivided 1/3rd interest; Valerie A. Brasher, as Trustee of The Brasher Living Trust established February 22, 1991, as to an undivided 50% interest

APN: 0472-211-21:

Nallammai Vijayakumar, a married woman as to an undivided 37.5% interest, Justin H. Chiu, a single man, as to an undivided 25% interest and Karthikeyan Reddy Aaravaboomi and Silpa Aaravaboomi, trustees of the Aaravaboomi Family Trust Dated April 11, 2013, as to an undivided 37.5% interest, all as tenants in common

6.2 Current Use of the Property

The subject property consists of undeveloped native desert covered primarily with creosote bushes.

6.3 Past Uses of the Property

The subject property has remained undeveloped native desert since prior to 1932 based on a review of historical topographic maps and aerial photographs.

6.4 Current and Past Uses of Adjoining Properties

The majority of the surrounding area has consisted of undeveloped native desert since prior to the 1930s. Also, Interstate 15 (Barstow Freeway) was developed west of the site prior to 1959.

Currently, the adjoining property consists of the following:

North: The subject property is bordered to the north by unpaved Johnson Road followed by undeveloped native desert.

South: The subject property is bordered to the south by undeveloped native desert.

East: The subject property is bordered to the east by undeveloped native desert.

West: The subject property is bordered to the west by undeveloped native desert. Farther to the west is Interstate 15 (Barstow Freeway).

7.0 SITE AND VICINITY CHARACTERISTICS

7.1 Physiographic Setting

The subject property is located in southwestern San Bernardino County, in the geographic subregion of the southwestern Mojave Desert known as the Victor Valley and commonly referred to as the "High Desert". The Mojave Desert is a wedge-shaped block bounded by the San Andreas Fault Zone on the southwest, the Garlock Fault Zone on the northwest, and the Colorado River on the east. The San Andreas Fault trends to the south of Victorville in an area known as the Cajon Pass. Victor Valley is an arid valley that is drained by the Mojave River which flows northwards through the Valley, primarily via underground aquifers.

The continental deposits consist of poorly sorted, well indurated conglomerate, sandstone, siltstone, shale, limestone, dolomite, volcanic tuff, and breccia. A succession of Pleistocene age older alluvium derived from weathering of the San Bernardino Mountains was deposited over the continental deposition followed by alluvial deposits of Quaternary age. The alluvium consists of unconsolidated to moderately indurated, poorly sorted gravel, sand, silt, and clay deposited as alluvial fans or deposited along ephemeral drainage channels and floodplains.

The Victor Valley overlies the Upper Mojave River Valley Groundwater Basin, which encompasses an area of approximately 645 square miles. There are two principal water-bearing units are present in this basin; one is in the alluvial fan deposits consisting of Pliocene and younger sediments and the other water-bearing zone is within flood-plain deposits consisting of Pleistocene and younger deposits. These water-bearing zones are generally unconfined and recharge typically occurs from a variety of conditions including precipitation, flow in ephemeral drainages and infrequent surface flow of the Mojave River (DWR, 2003).

The surface of the subject property is mostly level-graded, having an average elevation of approximately 2,970-feet above mean sea level and the natural surface drainage is to the south-southeast.^{2,3}

7.1.1 Soils Profile⁴

Surface sediments beneath the site consists of two soil types identified as follows:

- 1) Helendale
- 2) Cajon

8.0 SITE DESCRIPTION AND INSPECTION

An inspection of the Property and reconnaissance of the surrounding area was conducted on August 27, 2024 by Anthony Buck, Project Manager with AEC. The subject property is bordered to the north by Johnson Road; the southern, eastern, and western boundaries are not defined by established paved and/or unimproved roads. The subject site consists of native desert covered with creosote bushes and there are a few ephemeral drainages that incise the surface of the property. Also, AEC observed a small amount of windblown trash scattered across the site.

8.1 Hazardous Substances

There were no visual indications of the presence of hazardous materials located within the limits of the subject site during the property inspection associated with an identified or unidentified use.

8.1.1 Storage Tanks

There were no fill tubes, vent lines, dispensers, islands, or other visual indications of the existence of underground storage tanks (USTs) observed within the limits of the subject property at the time of AEC's site inspection.

Also, AEC's site assessment revealed no aboveground storage tanks (ASTs) onsite.

8.1.2 Stains or Corrosion

AEC did not identify any obvious stains or corrosion during this site assessment.

8.2 Natural Drainage

Surface water follows the topographic gradient of the site which is generally to the south-southeast.

8.3 Disturbed Areas

The subject property consists of undeveloped native desert covered with creosote bushes.

8.4 Hydraulic Equipment

No in-ground hydraulic equipment was observed on the subject property.

8.5 Electrical Equipment

No pole- or pad-mounted electrical transformers were observed within the boundaries of the subject property. Regional electric transformers are owned and operated by Southern California Edison (SCE).⁵ According to information obtained from SCE, all transformers within the SCE power distribution network suspected of containing PCBs in concentrations exceeding 50 parts per million were removed and replaced by 1987. Manufacture of PCB-containing electric power transformers was discontinued in 1984.

Testing of transformers for the presence of PCBs is not included within the scope of this site assessment; however, sampling is not recommended based on the absence of a transformer onsite.

8.6 Wastewater

There is no indication that wastewater is currently generated onsite.

8.6.1 Sewage Disposal Systems

No sewage disposal systems were identified onsite during this site assessment.

8.6.2 Pools of Liquid

AEC did not identify any areas of standing surface water during this site assessment.

8.6.3 Pits, Ponds, or Lagoons

AEC did not identify any onsite pit, ponds, or lagoons during this site assessment.

8.6.4 Drains and Sumps

AEC did not identify any drains or sumps during this site assessment.

8.7 Solid Waste Disposal

No evidence of solid waste disposal by burial was observed during the site assessment. However, AEC did identify a small volume of scattered windblown debris across the surface of the site.

8.8 Water Supply

AEC did not identify any domestic and/or irrigation water supply wells onsite.

8.9 Designated Wetlands

Under the U. S. Army Corps of Engineers regulations, wetlands⁶ are defined as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetlands generally include swamps, marshes, bogs and similar areas such as sloughs, prairie potholes, wet meadows, river overflows, mud flats, and natural ponds.

Based on review of the subject site, there are no areas on the subject, or nearby property that would be defined as Designated Wetlands Areas.

8.10 Asbestos-Containing Materials (ACMs)

Asbestos Containing Materials (ACMs) were commonly used in a wide variety of building products such as roofing shingles, composite siding, linoleum flooring, acoustic ceiling tiles, furnace and water heater exhaust piping and insulation, glues and mastics, stucco, joint compounds, and composite wallboards prior to 1980; however, use of ACMs post 1980 is known to have occurred at many locations. ACMs can be divided into material considered friable (easily crumbled or reduced to powder) and non-friable. Friable ACMs are regulated as hazardous materials due to the elevated long-term risk of developing lung cancer upon respiratory exposure and must be properly removed prior to renovation or demolition of any structure containing these materials. In addition to structures, ACMs have been historically used as "transite" piping for irrigation and flues. No transite pipe was identified on the subject property during the site reconnaissance portion of this assessment. Based on the absence of onsite structures at the subject property, asbestos is not suspected.

Asbestos sampling and laboratory analyses are beyond the scope of this site assessment conducted by AEC; however, sampling is not warranted based on the absence of onsite structures.

8.11 Radon

Radon⁷ is a colorless, odorless, tasteless, naturally occurring radioactive gas formed by the decay of uranium in soil and bedrock. Because uranium and radon occur naturally in varying amounts within rocks and soils found throughout the United States, radon is present in all the air that we breathe. Long-term exposure to elevated concentrations of radon in confined areas has been associated with an increased risk of lung cancer. The present action levels require exposure to concentrations of at least four picocuries/liter (4 pCi/L) of radon over an extended period of time. The State of California Department of Health Services conducted radon surveys across portions of San Bernardino County, during 1990. San Bernardino County has been classified as Zone 2 which has a predicted average indoor radon screening level between 2 and 4 pCi/L. Sampling has been conducted in the area of the subject property (Zip Code 92307) and the results indicated that out of the 27 tests conducted, only one sample exhibited a concentration higher than 4 pCi/L.

Radon sampling and laboratory analysis is beyond the scope of this assessment; however, sampling is not recommended based on the absence of onsite structures and the absence of radon-source terrain.

8.12 Lead

According to information published by the United States Department of Housing and Urban Development (HUD),⁸ approximately three out of every four pre-1978 buildings contain lead-based paint and/or lead plumbing components. Based on the absence of onsite structures at the subject property, lead-based paint is not suspected.

Lead sampling and laboratory analyses are beyond the scope of this site assessment; however, sampling is not warranted based on the absence of onsite structures.

8.13 Odors

Strong, pungent, or noxious odors were not identified at the subject property during this site assessment.

8.14 Heating and Cooling

No heating and/or cooling units were observed at the subject property.

8.15 Stressed Vegetation

AEC did not observe any areas with stressed vegetation during this site assessment.

9.0 INTERVIEWS, DATA GAPS, AND PRIOR REPORTS

9.1 Interviews

9.1.1 Interview with Owner and/or Site Representative

AEC was not provided with contact information for the multiple property owner(s); therefore, an interview was not conducted. The absence of the owner interview constitutes a data gap; however, since the subject property has remained undeveloped ground since prior to the 1930s; it is the opinion of AEC that this data gap is not a significant concern that will alter the conclusions and recommendations presented in this report.

9.1.2 Interview with User

Mr. Brandon Gallup, a representative of Covington Investments, LLC and its successors and assigns, would only be aware of any environmental concerns if they are disclosed, to which he has received no adverse notifications to date.

9.1.3 Interview with Local Government Officials

The San Bernardino County Fire Department, the Apple Valley Building and Safety Division, the Mojave Desert Air Quality Management District, and the Regional Water Quality Control Board were contacted for records; however personal interviews were not conducted. Details of the applicable file reviews are discussed in Section 11.2.

9.2 Data Gaps

A data gap is generally defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may include insufficient historical information, the inability to interview person(s) with direct site knowledge, or lack of access to all areas during the investigation.

Based on aerial photos and topographic maps for the subject site that were reviewed from years 1932 through 2024 in reasonably ascertainable intervals there are no apparent data gaps related to the subject site; however, AEC was unable to conduct an interview with a property owner regarding the history of the subject property and AEC did not receive a response from the Apple Valley Building and Safety Division regarding any building permits associated with the subject property. The absence of the owner interview and the lack of response from the building division constitutes a data gap; however, since the subject property has remained undeveloped ground since prior to the 1930s, it is the opinion of AEC that this data gap is not a significant concern that will alter the conclusions and recommendations presented in this report.

9.3 Prior Reports

No prior reports regarding the subject site have been provided to AEC for review.

10.0 SITE HISTORY

10.1 Aerial Photograph and Topographic Map Review

Historical aerial photographs, Sanborn Maps and USGS Topographic Maps of the site were reviewed by an AEC representative who noted the following observations:

Map Date: 1932

Quad: Barstow

Scale: 1"=10,416'

The subject property is depicted as undeveloped. An unpaved road is illustrated east of the site and Stoddard Wells Road is depicted to the south. There are two water wells evident to the south of the site along Stoddard Wells Road and the Bell Mountain Wash. Scattered structures are evident to the north and dirt roads traverse the general area.

Flight Date: 1953

Flyer: USDA

Scale: 1"=610'

The subject property and the majority of the surrounding property consist of native desert. Also, Stoddard Wells Road is visible to the south.

Flight Date: 1959**Flyer: USDA****Scale: 1"=610'**

Again, the subject property and the majority of the surrounding property consist of native desert. Stoddard Wells Road remains visible to the south. Also, Interstate 15 (I-15) has been constructed to the west.

Map Date: 1968/1970**Quad: Apple Valley North/Victorville****Scale: 1"=2,000'**

The subject property is still depicted as undeveloped ground and is now bordered by an unpaved portion of Johnson Road to the north. Also, an unpaved dirt road terminates at the southeast corner of the property. Interstate 15 (I-15) has been constructed west of the subject property while Stoddard Wells Road remains illustrated to the south. The general area primarily consists of native desert that is traversed by roads and ephemeral drainages associated with the Bell Mountain Wash; a church is also evident to the southeast.

Flight Date: 1969**Flyer: USGS****Scale: 1"=610'**

The subject property and the majority of the surrounding property still consist of native desert. Stoddard Wells Road remains visible to the south and I-15 continues to be depicted to the west.

Flight Date: 1973**Flyer: USGS****Scale: 1"=610'**

There is no significant change to the subject property or surrounding area from the date of the previous photograph.

Flight Date: 1979**Flyer: USDA****Scale: 1"=610'**

As before, the subject property and the majority of the surrounding property consist of native desert. Stoddard Wells Road remains visible to the south and I-15 continues to be depicted to the west.

Flight Date: 1984**Flyer: USDA****Scale: 1"=610'**

There are no significant changes from the previous photograph.

Map Date: 1993**Quad: Apple Valley North/Victorville****Scale: 1"=2,000'**

As before, the subject property is depicted as undeveloped ground and is bordered to the north by an unpaved portion of Johnson Road. I-15 and Stoddard Wells Road remain evident to the west and to the south, respectively. The general area primarily consists of native desert that is traversed by roads and ephemeral drainages associated with the Bell Mountain Wash; the church remains evident to the southeast.

Flight Date: 1994**Flyer: Google****Scale: 1"=465'**

Again, the subject property and the majority of the surrounding property consist of native desert. Stoddard Wells Road remains visible to the south and I-15 continues to be depicted to the west.

Flight Date: 2003**Flyer: Google****Scale: 1"=465'**

The subject property and the majority of the surrounding property still consist of native desert. Stoddard Wells Road remains visible to the south and I-15 continues to be depicted to the west.

Flight Date: 2009**Flyer: Google****Scale: 1"=465'**

There are no significant changes from the previous photograph.

Map Date: 2012**Quad: Apple Valley North/Victorville****Scale: 1"=2,000'**

Structural details are not described on this map, only surface streets and waterways. The subject property continues to be bordered to the north by Johnson Road. I-15 and Stoddard Wells Road remain evident to the west and to the south, respectively. The general area primarily consists of native desert that is traversed by roads and ephemeral drainages associated with the Bell Mountain Wash.

Flight Date: 2016**Flyer: Google****Scale: 1"=465'**

As before, the subject property and the majority of the surrounding property consist of native desert. Stoddard Wells Road remains visible to the south and I-15 continues to be depicted to the west.

Map Date: 2018**Quad: Apple Valley North/Victorville****Scale: 1"=2,000'**

Again, structural details are not described on this map, only surface streets and waterways. The subject property continues to be bordered to the north by Johnson Road. I-15 and Stoddard Wells Road remain evident to the west and to the south, respectively. The general area primarily consists of native desert that is traversed by roads and ephemeral drainages associated with the Bell Mountain Wash.

Flight Date: 2024**Flyer: Google****Scale: 1"=465'**

The subject and surrounding property generally appear as it does today.

11.0 ENVIRONMENTAL DATABASE AND AGENCY FILE REVIEW

11.1 Review of Federal, State, Tribal, and Local Government Databases

AEC contracted Environmental Data Resources (EDR)⁹ to perform database searches of readily available Federal, State, and Local database information systems for the purpose of identifying known recognized environmental conditions present on nearby properties which have the potential to adversely impact the site being assessed in this study.

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained. A description of each of the databases searched is included in the report, which is attached as Appendix B. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (CERCLIS, State CERCLIS, VCP, Brownfields, Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

The review of the records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the subject property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

A review of the EDR Radius Map Report indicates that neither the subject property, nor any offsite nearby properties (within ¼-mile) were identified in the database. Below is a listing of the databases researched by EDR.

Databases Reviewed	Search Distance (SD)	Number of Sites Within SD
Federal National Priorities List (NPL) Site List	1-Mile	0
Federal Delisted NPL Site List	1-Mile	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	1/2-Mile	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites	1/2-Mile	0
Federal RCRA CORRACTS List	1-Mile	0
Federal RCRA non-CORRACTs TSD List	1/2-Mile	0
Federal RCRA Generators List	1/4-Mile	0
Federal Institutional/Engineering Control Registries	1/2-Mile	0
Federal ERNS List	On-Site	0
California and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	1-Mile	0
California and Tribal Lists of CERCLIS Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	1-Mile	0
California and Tribal Landfills or Solid Waste Facilities List	1/2-Mile	1
California and Tribal Leaking Underground Storage Tank (LUST) Facility List	1/2-Mile	0
California and Tribal Registered Storage Tank Facility List	1/4-Mile	0
California and Tribal Voluntary Cleanup Sites	1/2-Mile	0
Local Brownfields Sites	1/2-Mile	0
Local Landfill/Solid Waste Disposal Sites	On-Site to 1/2-Mile	0
Local List of Hazardous Waste/Contaminated Sites	On-Site to 1-Mile	0
Local List of Registered Storage Tanks	1/4-Mile	0
Local Land Records	On-Site to 1/2-Mile	0
Records of Emergency Release Reports	On-Site	0
Other Ascertainable Records/Cortese	On-Site to 1-Mile	0

11.2 Regulatory Agency Records

11.2.1 San Bernardino County Agricultural Commission¹⁰

The San Bernardino County Agricultural Commissioner's Office maintains records of restricted herbicides and pesticides registered for application to the subject site for a period of 5 years. Since there is no current agricultural production on the subject property, there is no requirement for a Restricted Materials Permit.

11.2.2 Apple Valley Building and Safety Division¹¹

The Apple Valley Building and Safety Division maintains records of building permits. AEC requested records for the subject property on August 23, 2024; however, a response was not received prior to completion of this report. Since AEC was not provided records prior to completion of this report, this constitutes a data gap; however, it is the opinion of AEC that the absence of this file review will not alter the conclusions and recommendations presented in this report.

11.2.3 San Bernardino County Fire Department¹²

The San Bernardino County Fire Department (SBCoFD) – Hazardous Materials Division maintains records of hazardous materials releases from underground storage tanks and/or emergency responses. AEC requested records for the subject property on August 23, 2024 and the email response from Ms. Christina Rivera on August 27, 2024 indicates that there are no records regarding the subject property.

11.2.4 Mojave Desert Air Quality Management District¹³

The Mojave Desert Air Quality Management District (MDAQMD) maintains records of permits related to pollutant air emissions for facilities located throughout the MDAQMD. AEC searched the online database on August 23, 2024 and did not identify any records for the subject property.

11.2.5 California Department of Conservation – Geologic Energy Management Division (CalGEM)¹⁴

According to the CalGEM (formerly DOGGR) Reference Maps G & K, no oil wells have been drilled at the subject property. Also, the subject property is not within the Administrative Boundary of an Oil or Gas Field.

11.2.6 Lahontan Regional Water Quality Control Board¹⁵

The Lahontan Regional Water Quality Control Board (RWQCB) maintains a database of contaminated groundwater sites (GeoTracker). AEC has accessed GeoTracker to identify if the subject property, or adjoining and/or nearby properties have former or current soil and/or groundwater contamination from leaking underground storage tanks (USTs). AEC's database review on August 23, 2024 indicates the subject property is not listed as a leaking UST or cleanup site. Also, no offsite nearby properties within 1,000-feet were identified in the database. In addition, prior contact with staff at the Lahontan RWQCB indicates that they would have no files for a property other than what is available in the GeoTracker database; therefore, a public records request was not submitted for this site.

11.2.7 Department of Toxic Substances Control¹⁶

The Department of Toxic Substances Control (DTSC) provides access to detailed information on hazardous waste permitted and corrective action facilities, as well as existing site cleanup information through their website EnviroStor. AEC has accessed this database and determined that the subject property is not listed, nor are there any offsite facilities within 1,000-feet of the subject property.

11.2.8 Office of the State Fire Marshal Pipeline Safety Division¹⁷

AEC located the subject Property on the National Pipeline Mapping System and determined that there are no pipelines bordering or traversing the subject property.

12.0 VAPOR ENCROACHMENT SCREENING

ASTM Standard E 2600-22 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (VES) was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the subject property. The screening involves a two-tiered approach to assessing VEC risk as described below.

12.1 VES Tier I

12.1.1 Search Distance Test/Chemicals of Concern Test

The search distance test is conducted in conjunction with the Phase I ESA using ASTM E1527 and involves a review of the regulatory database report and available historical records to make a determination if any *known or suspect potentially contaminated* properties exist within the Area of Concern (AOC). High risk sites are typically current and former gas stations, former and current dry cleaners, manufactured gas plants, and industrial sites (Brownfields). The AOC is defined by the approximate minimum search distance of 1/3-mile surrounding the target property or 1/10-mile for petroleum hydrocarbon products. Note: the default AOC may be expanded or reduced by AEC using experience and professional judgement based on consideration of groundwater flow direction, subsurface characteristics, surficial features and/or man-made features.

If no known or potentially contaminated sites with Contaminants of Concern (COCs) exist within the AOC, a VEC does not exist and no further inquiry is necessary. If the contamination is evident at the known site, or the potentially contaminated site within the AOC consists of COCs, then a Vapor Encroachment Condition (VEC) exists and Tier II is recommended.

12.2 VES Tier II

12.2.1 Data Collection

Tier II applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to provide greater certainty to whether or not a VEC exists using non-invasive and invasive data collection. The non-invasive investigation includes review of available regulatory files to identify the source of contamination and the migration pathway of the COC. If this information is not accessible, invasive data collection can be conducted and may include sampling of soil, soil gas, and/or groundwater on the target property, target property boundary, and/or offsite.

12.2.2 Plume Test

The Plume Test assesses whether or not a plume is close enough to the property to result in a VEC using information obtained from non-invasive data collection.

1. Critical Distance Determination – Determine lineal distance from property to edge of plume in any direction (vertical, horizontal, lateral).
2. VEC exists if a plume of volatile organic compounds (VOCs), semi-volatile organic compounds (S-VOCs), or Volatile Inorganic compounds or free petroleum product accumulating above water table within 100-feet of the property or if a plume of dissolved volatile petroleum hydrocarbons within 30-feet of the property.

It is the opinion of AEC that a Vapor Encroachment Condition does not exist.

13.0 USER PROVIDED INFORMATION

Specific information provided by the User is discussed below.

13.1 Title Records

Chain-of-title reports were provided to AEC for review.

13.2 Environmental Liens or Activity and Use Limitations

No information pertaining to environmental liens or activity/use limitations filed against the Property was provided by the User or identified by AEC during this assessment.

13.3 Specialized Knowledge

The User has provided no historical investigation reports pertaining to the Property and/or the area around the Property.

13.4 Valuation Reduction for Environmental Issues

No information pertaining to Property valuation was provided by the User.

14.0 FINDINGS AND CONCLUSION

The results of this investigation have identified no *de minimis conditions*, no *recognized environmental conditions (RECs)*, no *controlled recognized environmental conditions*, and no *historical recognized environmental conditions*.

AEC has conducted this Phase I Environmental Site Assessment at the 15.518-acre undeveloped property that is bordered to the north by Johnson Road and is 0.125-miles west of Grasshopper Road in Apple Valley, California (the Property) in conformance with the scope and limitations of ASTM Standard E1527-21. Any exceptions to, or deletions from this practice are described in Section 5.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; therefore, AEC recommends that no further action is warranted.

16.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

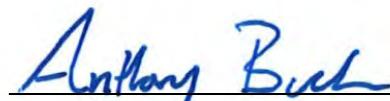

Advanced Environmental Concepts, Inc. appreciates the opportunity to provide our professional assistance to Covington Investments, LLC and its successors and assigns on this project. If you have any questions regarding this assessment or if AEC can be of further service, please call us at (661) 395-1646.

In addition, I declare to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. I have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Sincerely,

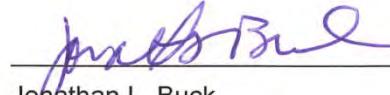

Advanced Environmental Concepts, Inc.

This report has been prepared by:

Anthony R. Buck
Project Manager

This report has been reviewed by:

Jonathan L. Buck
Principal Geologist

15.518-acres - Apple Valley

17.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

AEC staff is composed of three primary environmental professionals that perform Phase I Environmental Site Assessments on a routine basis. Qualifications profile for these individuals is provided in the following section.

Jonathan L. Buck

Mr. Buck received a Bachelor of Science degree in Geology from the University of California, Santa Barbara, in 1981 and was professionally engaged in the petroleum industry in various capacities through 1985. Mr. Buck joined the environmental industry in 1985 and formed **Advanced Environmental Concepts Inc.** in 1989. Since its inception, **AEC** has been a full service environmental consulting firm specializing in Phase I Environmental Site Assessments, UST programs, and soil and groundwater assessment and cleanup programs. Mr. Buck is a State of California Registered Geologist (#7468) and has performed numerous ESAs on diverse properties throughout California, Arizona, Oregon, and Washington.

April J. Saceaux

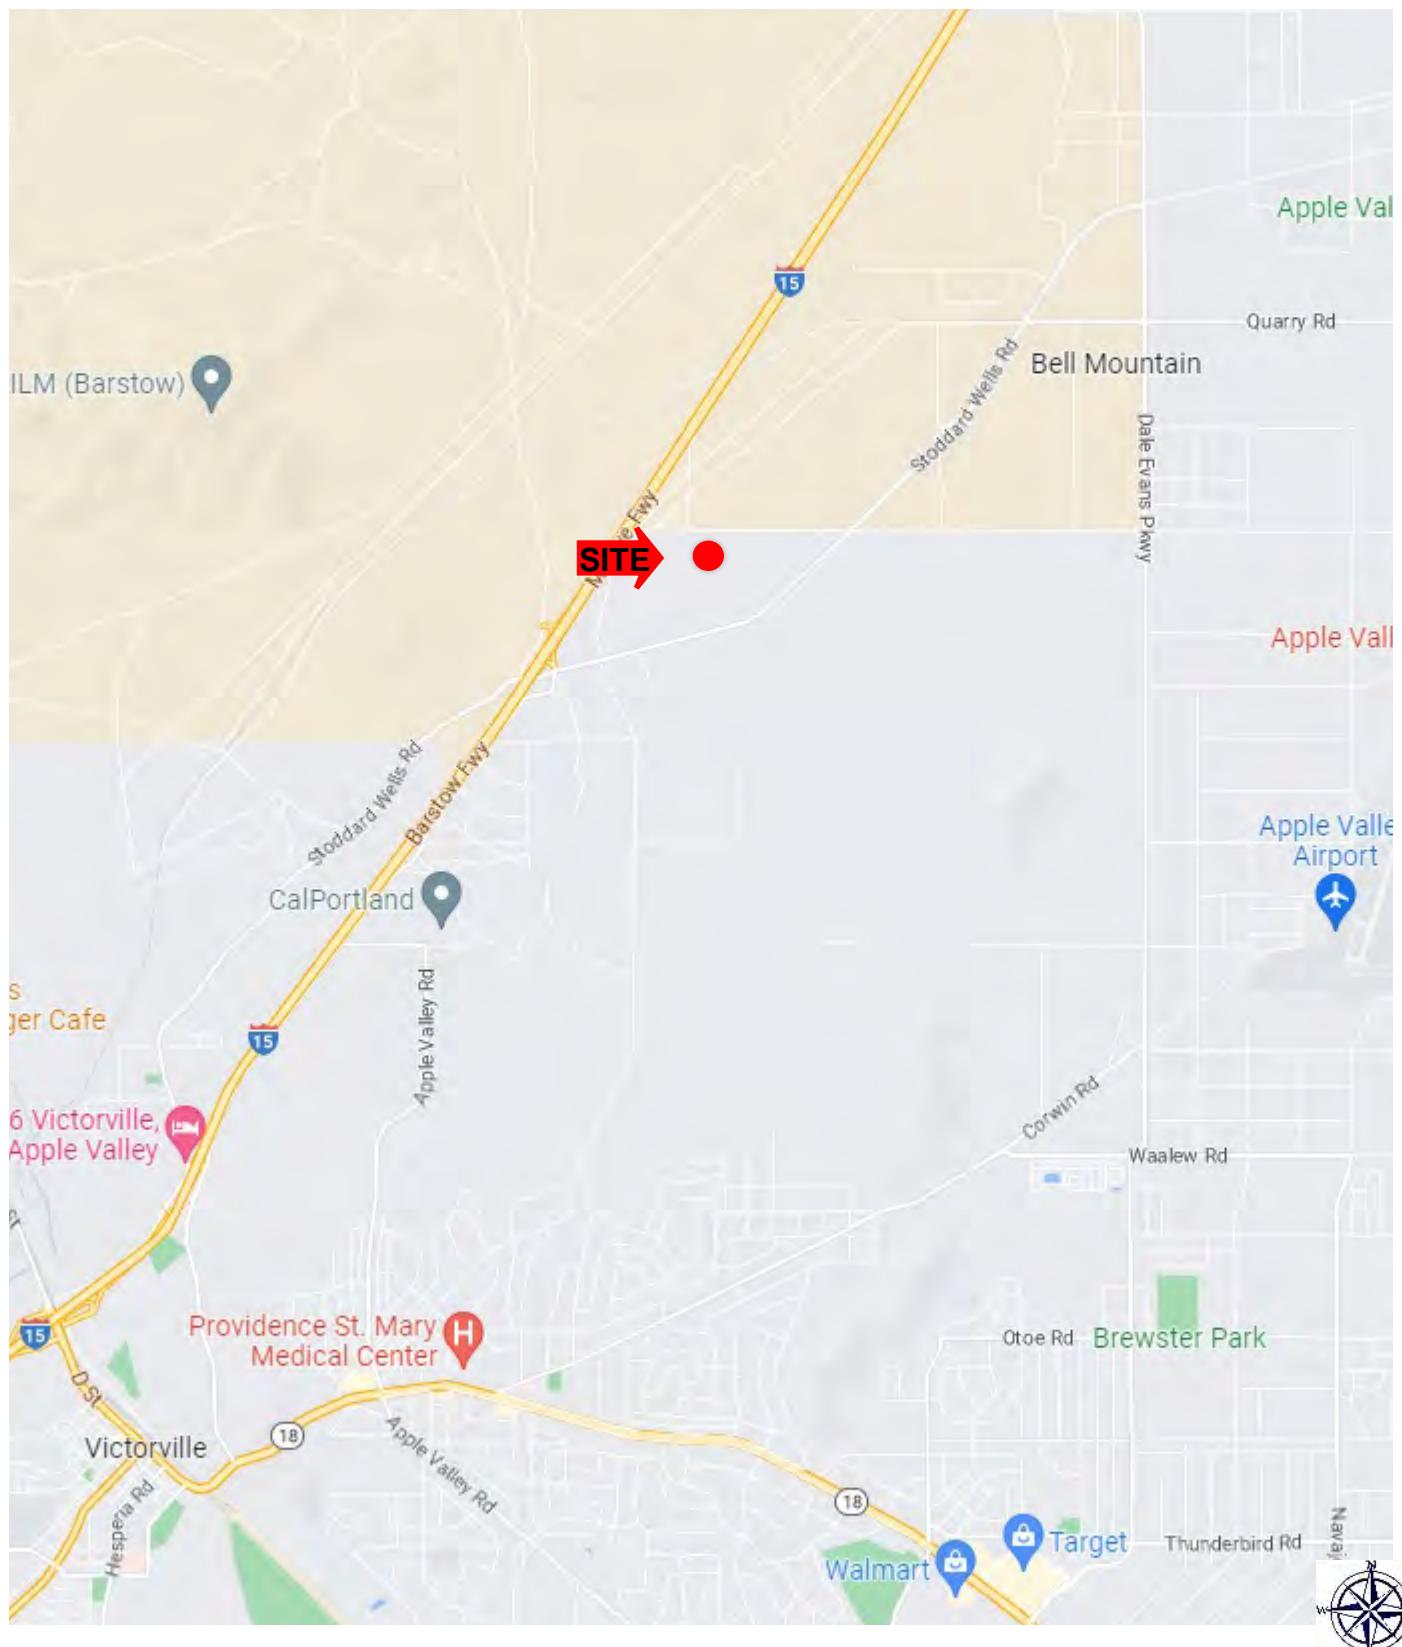

Ms. Saceaux joined AEC in June 2008 and is in her fourteenth year as a Project Manager preparing Environmental Site Assessments under the direct supervision of a California Registered Geologist.

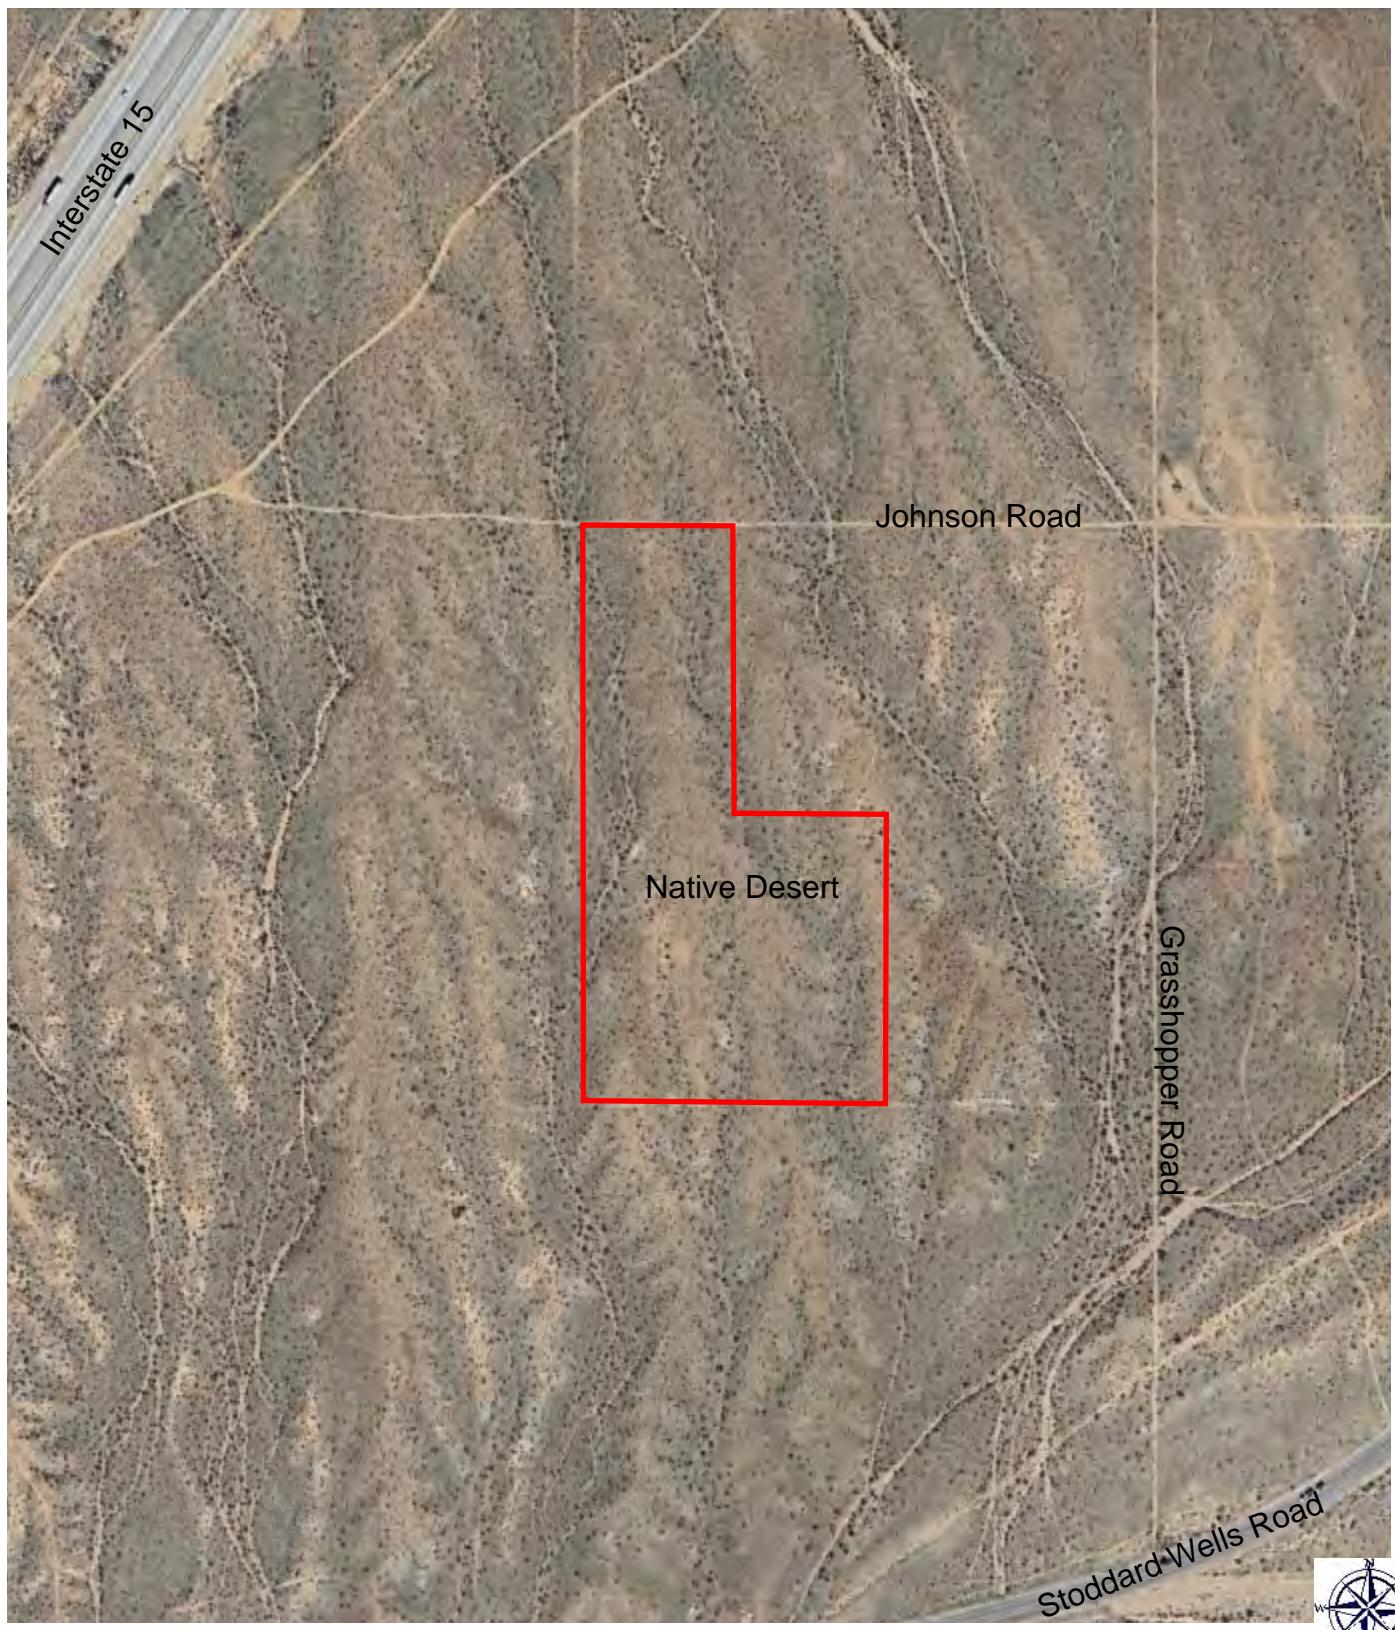

Anthony R. Buck

Anthony Buck has three years of experience as a Project Manager under the direct supervision of a California Registered Geologist. His environmental industry experience entails soil and groundwater characterization studies, removal of soils impacted with petroleum hydrocarbons, groundwater monitoring well construction, sampling and analysis as well as conducting Phase I Environmental Site Assessments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within

EXECUTIVE SUMMARY

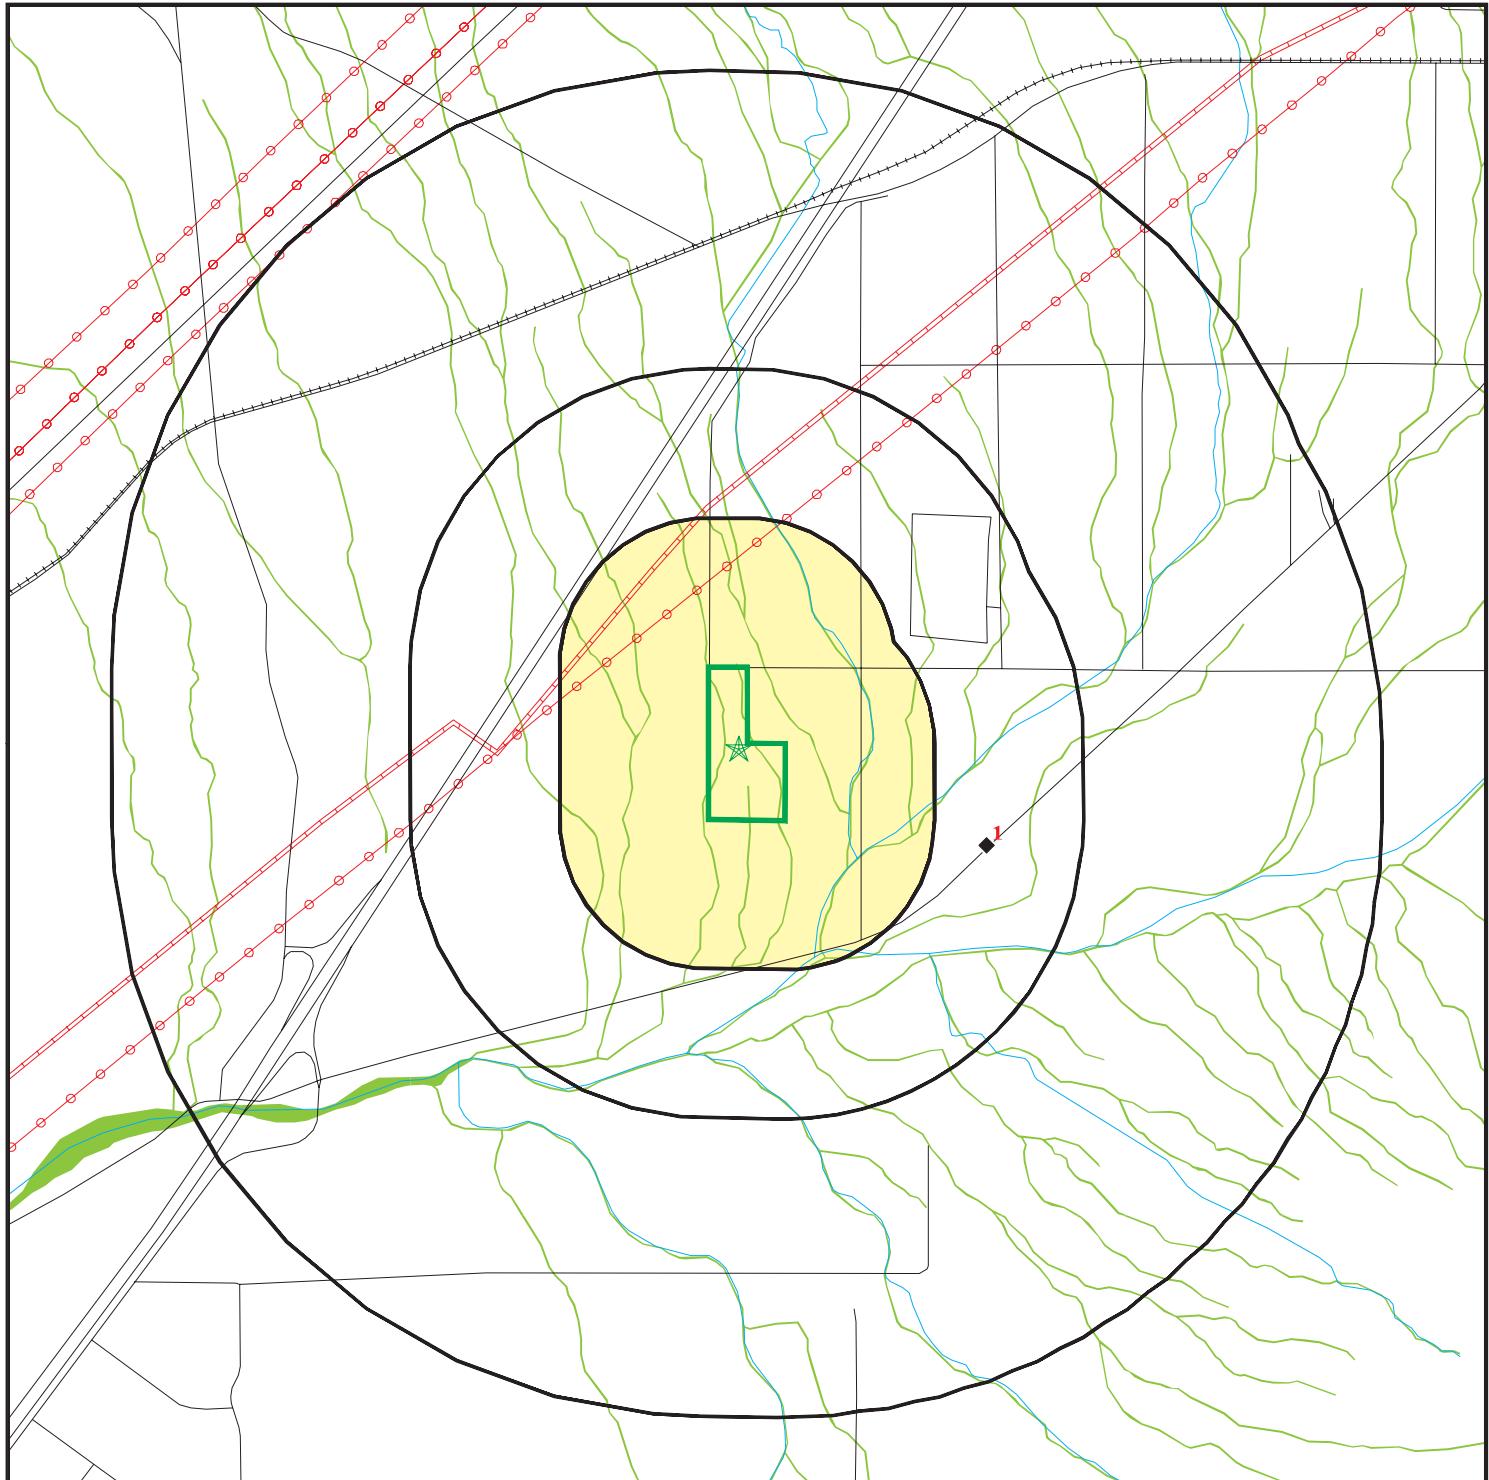

approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/22/2024	Source: EPA
Date Data Arrived at EDR: 06/03/2024	Telephone: N/A
Date Made Active in Reports: 06/26/2024	Last EDR Contact: 08/01/2024
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/07/2024
	Data Release Frequency: Quarterly

Telephone 206-553-8665	

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/22/2024	Source: EPA
Date Data Arrived at EDR: 06/03/2024	Telephone: N/A
Date Made Active in Reports: 06/26/2024	Last EDR Contact: 08/01/2024
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/07/2024
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/14/2024	Source: Department of the Navy
Date Data Arrived at EDR: 02/16/2024	Telephone: 843-820-7326
Date Made Active in Reports: 04/04/2024	Last EDR Contact: 07/31/2024
Number of Days to Update: 48	Next Scheduled EDR Contact: 11/18/2024
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/24/2024	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/08/2024	Telephone: 703-603-0695
Date Made Active in Reports: 08/15/2024	Last EDR Contact: 08/08/2024
Number of Days to Update: 7	Next Scheduled EDR Contact: 12/02/2024
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/24/2024	Source: Environmental Protection Agency

Number of Days to Update: 85

Next Scheduled EDR Contact: 11/04/2024

Data Release Frequency: Quarterly

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Next Scheduled EDR Contact: 10/14/2024
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date:	2021
Southwest Map:	50005443 VICTORVILLE, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

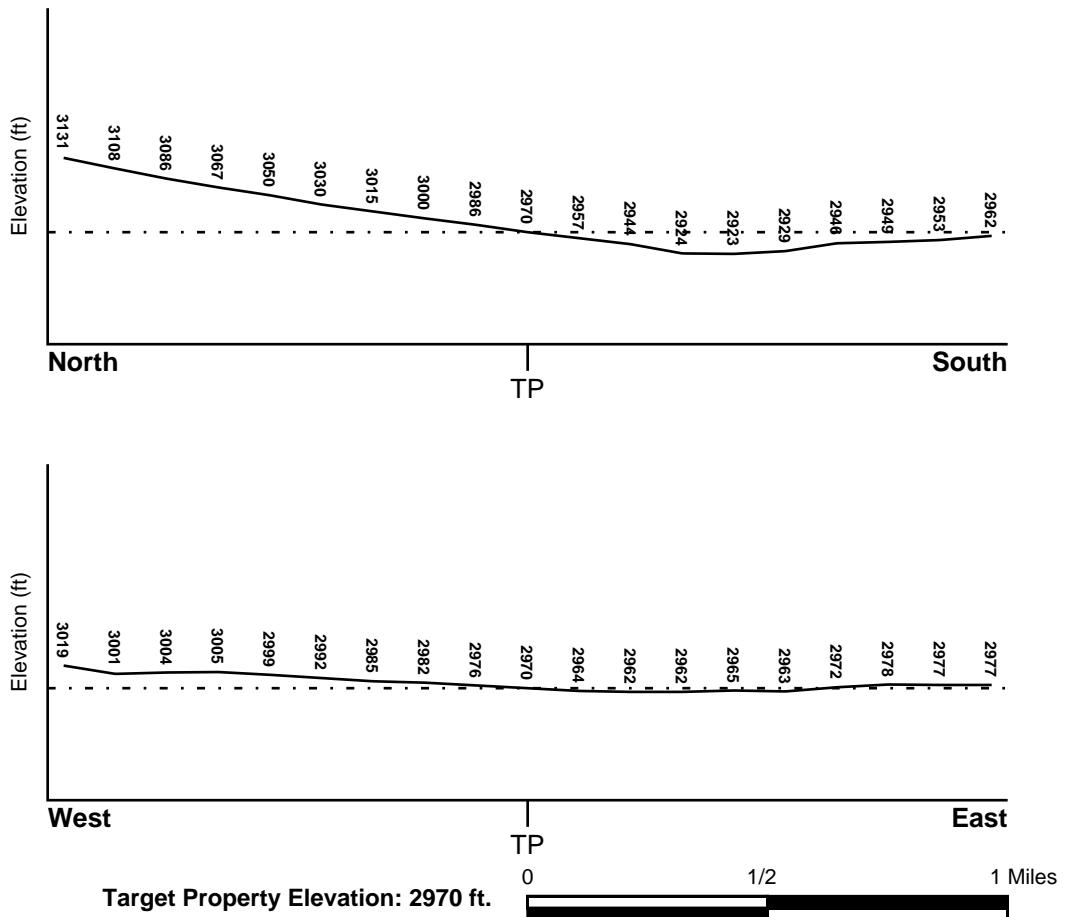

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06071C5850F	FEMA Q3 Flood data

06071C5810H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic
NOT AVAILABLE	Data Coverage YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HELENDALE

Soil Surface Texture:

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	5 inches	29 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4
3	29 inches	66 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4
4	66 inches	98 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: CAJON

Soil Surface Texture:

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	5 inches	59 inches		Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Advanced Env. Concepts were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Advanced Env. Concepts (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
