

Letter from the Director

Dear Prospective Applicants,

The Town of Apple Valley is seeking an experienced, detail oriented, and motivated IT professional to join the Innovation and Technology Department as our next IT Coordinator.

The Town of Apple Valley is a unique community that values thoughtful development, high design standards, open spaces, and a proactive, business-friendly approach to economic growth. The Community enjoys a strong sense of identity, quality of life, deep-rooted community pride with a family-friendly atmosphere, and a shared vision for the future.

This advanced-level role offers the opportunity to perform technical and administrative work supporting the Town's network infrastructure, servers, virtualization platforms, backup systems, telecommunications, security, and computer deployments. With emphasis on infrastructure support while actively contributing to the department's overall technology functions, as departmental needs evolve, assignments may expand to include business applications and broader technology operations.

We're looking for someone having the desired technical qualifications and experience in configuring, deploying, and managing the following technologies and practices:

- Cisco infrastructure, including Cisco IOS, switching and network configuration, Cisco Secure Firewall (FMC), VPN configuration using Cisco Secure Client, and endpoint security with AMP.
- Cisco Webex platform for VoIP and unified communications.
- Windows Server administration, including Active Directory and Domain Services, DNS/DHCP, Group Policy, WSUS, and Certificate Services.
- VMware vSphere virtual environments and HP Nimble dHCI or similar hyper-converged/virtual environment hardware solutions.
- Veeam Backup and Replication for data protection and disaster recovery.
- Network security best practices, including development and implementation of policies and procedures, server hardening techniques, and adherence to industry standards.

The Town of Apple Valley - IT Department is a small team, which means you will gain broad exposure, take on critical and meaningful responsibility, and see the impact of your work across the organization with performance improvements and security posture.

If you're looking for a role where you can contribute towards initiatives with great impact across the organization and the public, apply a strong work ethic for the success of the Town, and provide excellent customer service to our users, we encourage you to apply!

Sincerely,

Brandon Cales, CIO / Director of Innovation and Technology
